Nano Infrared Barrel Heaters

Infrared Nano Heating Technology

Upto 70% Energy Saving

Upto 50% Faster Heating in Comoarison with Traditional Heater

Nano Infrared Barrel Heater – A high-efficiency heating solution engineered to minimize heat loss, reduce power consumption, and deliver faster, uniform heating compared to conventional band heaters.

CONSTRUCTION DETAILS

ADVANTAGES & BENEFITS

Outer Sheet Metal Casing
Provides mechanical protection, structural rigidity, and safe containment of internal insulation layers.

Aerogel Insulation
Ultra-low thermal conductivity insulation that significantly reduces heat loss to the atmosphere, enabling major energy savings.

HD Ceramic Wool Insulation
High-density thermal insulation that retains heat within the heater assembly and improves overall thermal efficiency.

Heat Reflective Insulation Layer (Radiant Barrier)
Reflects infrared radiation back toward the barrel, minimizing radiant heat loss and improving heating effectiveness.

Quartz Tube
High-purity quartz tube enables efficient infrared heat transmission while withstanding extreme operating temperatures.

Metallic Heat Sink
Ensures uniform heat distribution, stabilizes temperature, and protects internal components for longer heater life.
